

Merchant Administration

SpeedChex

Technical Documentation

API Available upon request support@achq.com

Real-Time Transaction Authorization & Automation

Customer Interface API:

API documentation for routing customers to the SpeedChex servers for data collection and response handling. Customer will be redirected back to merchant website when check payment has been processed.

Express Authorization API:

Documentation for sending single transactions in realtime to SpeedChex and receiving an authorization or rejection response. All data collection and response handling to the customer is performed by the merchant.

Recurring Schedule Command API:

Documentation for creating and sending a recurring transaction schedule to Speedchex and receiving an authorization or rejection response. All data collection and response handling to the customer is performed by the merchant.

SpeedChex Data Management

Batch Processing API:

Documentation and file specs for automating the process of uploading batch files of transactions to SpeedChex.

Express Verification API:

Documentation for performing verification on a single account in real-time using the SpeedChex ATMVerify system.

ATM Verify Response Codes:

Explanation of all possible ATMVerify responses that merchants can receive if they are subscribed to the SpeedChex ATMVerify system.

Transaction Status Tracking API:

Create an automated link between their software and the SpeedChex Electronic Gateway for tracking the return status on each electronic check transaction submitted for processing.

General Information**[Speedchex Security & Reliability](#)**

Describes the security and reliability features of the Speedchex system.
